03 - Info

Answer the prompted questions, this will help us calculate your BMI and calorie count. (you can easily change the entered in the app under the settings tab.)

04 – App

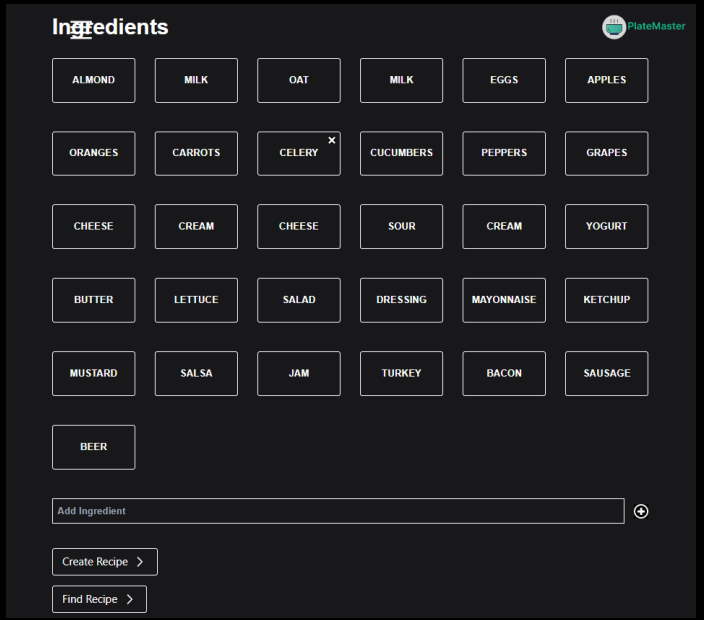
Once the main page has loaded, you will be prompted to either upload an image of your fridge or insert ingredients manually. There are also many more features which we will explore next.

Recipe creator:

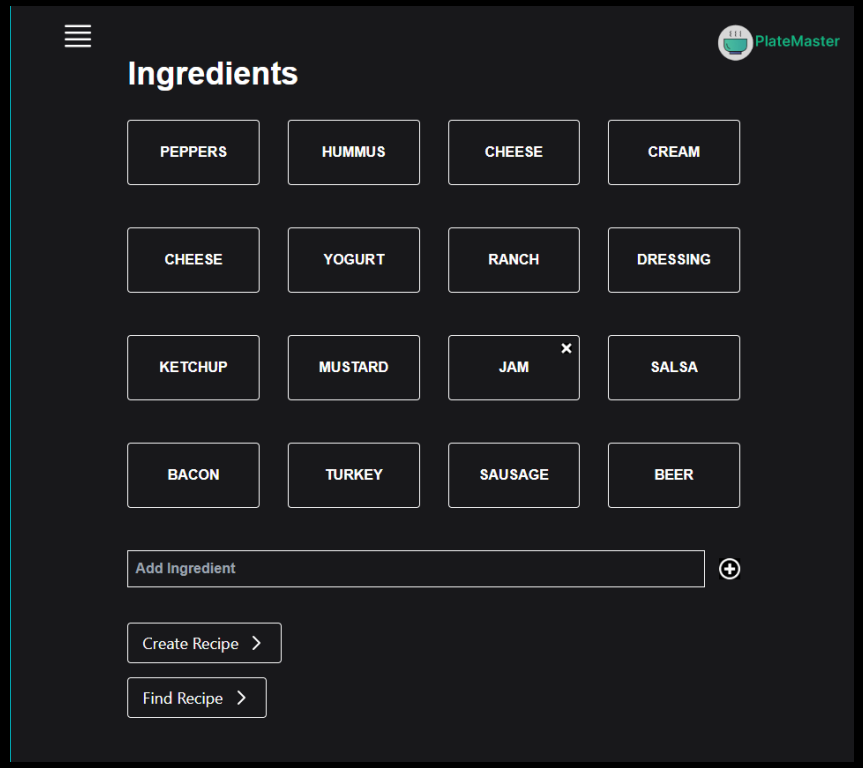
On the main page of the software, you can create a recipe either by uploading an image or manually entering the ingredients you have.

Image: The Vision Pro Gemini will automatically pick up ingredients it sees and enter them in the **Ingredients tab**

Manual: You can enter any ingredient you wish in the **Ingredients tab.**

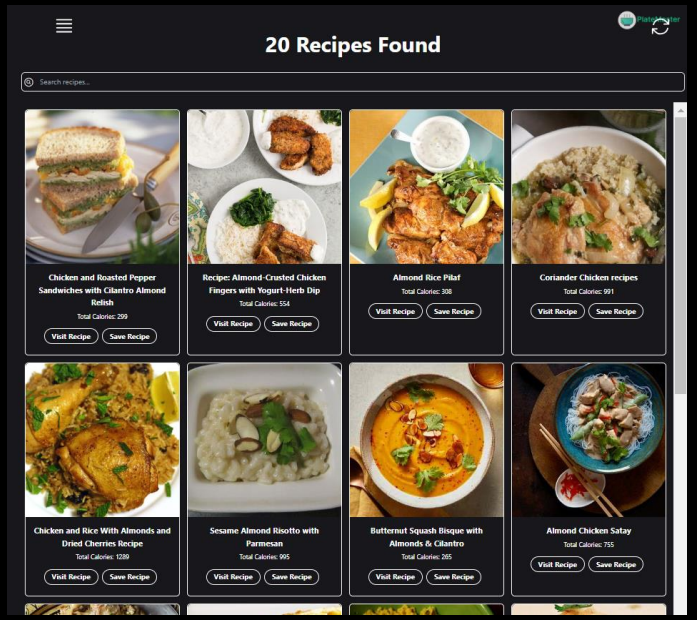


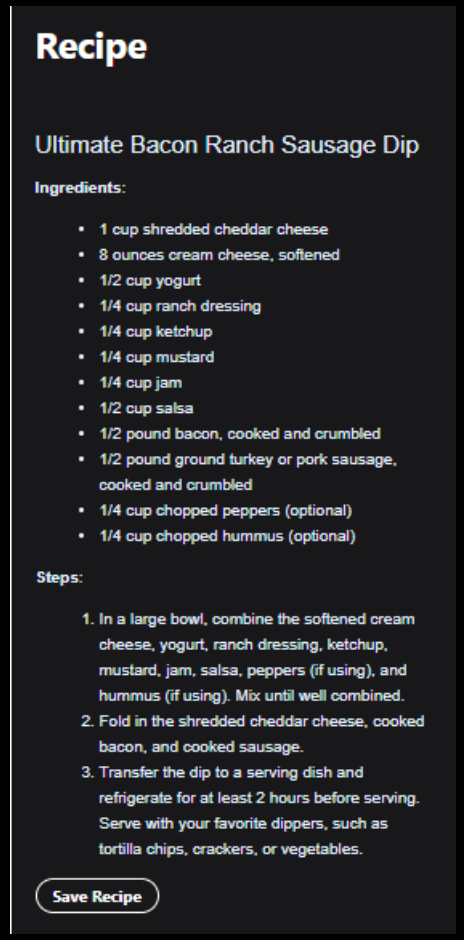
Finally, you can either create recipe, where Gemini Vision will automatically generate an original recipe. Or, you can click “find recipe”, where your ingredients would be matched in the Edamam Recipe database to find the best recipe for you.



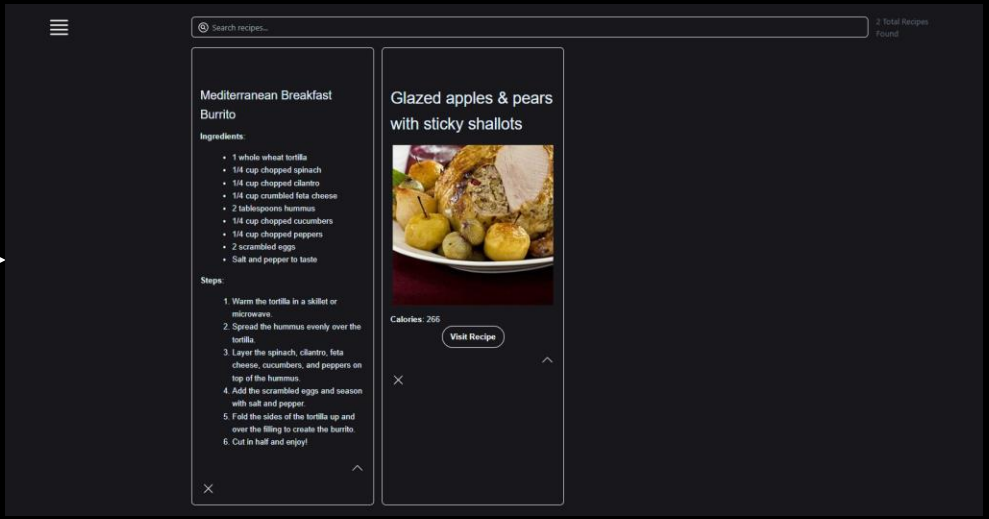
Create recipe

Find recipe

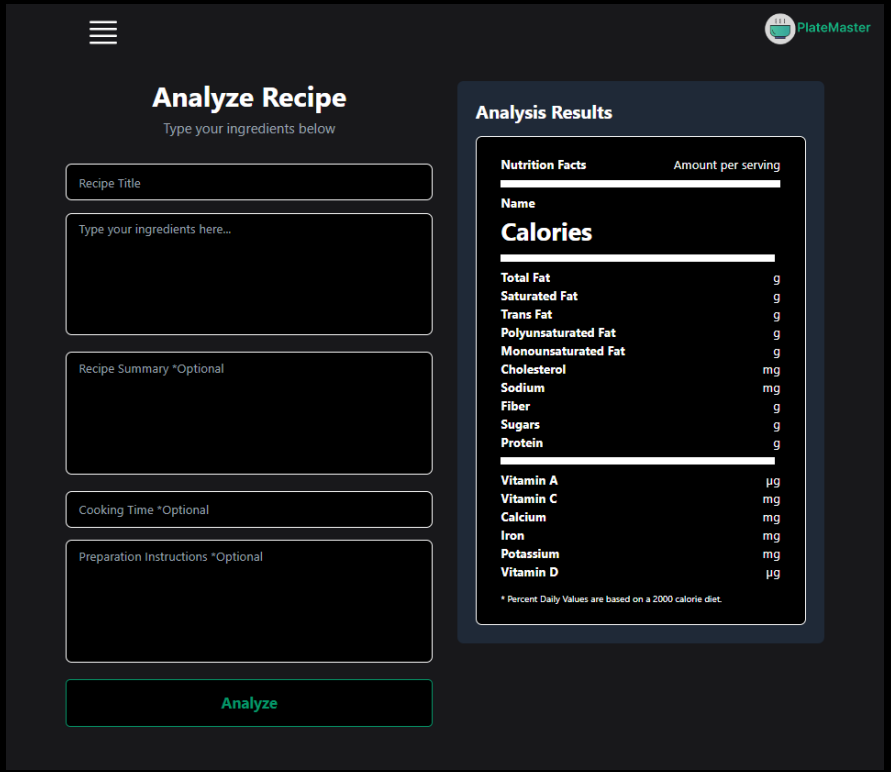




Saved recipes function: Any recipe you decided to save can be found under this tab, you can toggle expand to see the calories and/or to visit any recipe

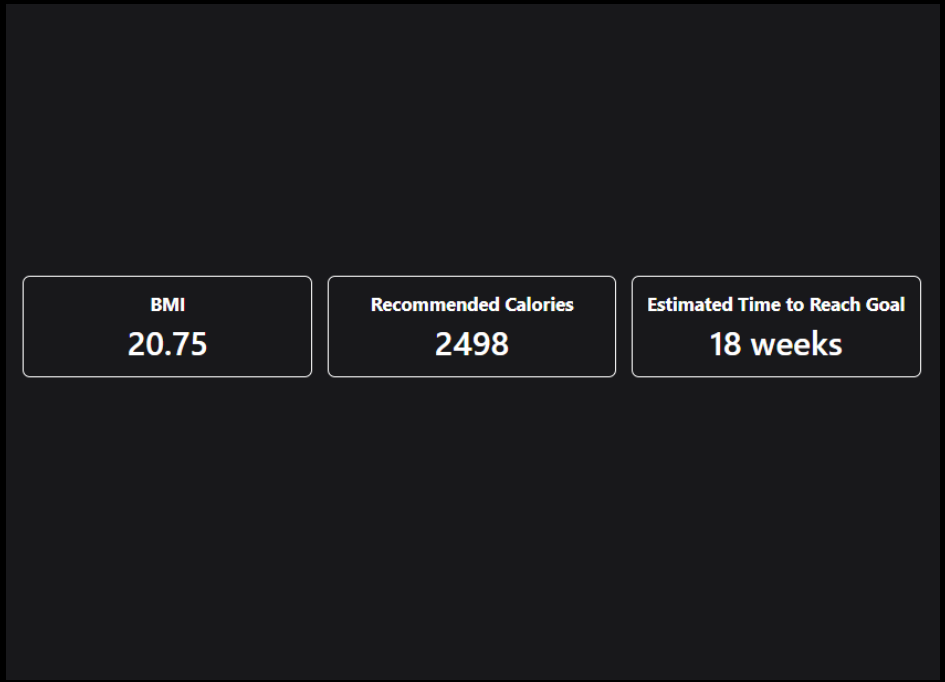


Analyze recipe, you can add a recipe here to have a calorie count and a nutrient label for those ingredients.



Calorie counter:

Based on the questions prompted when you created an account, this tab would list you your BMI(Body Mass Index), recommended daily calories (based on personal BMR and TDEE), and estimated time to reach your weight goal.



Based on the data:

Age=15
Sex=M
Goal-Weight=142
Activity Level: Moderate exercise
Current weight=163
Height=72in

Technologies Used:

Nuxt.js
Vue.js
Tailwind CSS
Supabase
TypeScript
JavaScript
HTML
Vite.js
Gemini API
Edamam API

Note: This project was made from scratch, it is compatible with most devices, including mobile and desktop. (Safari works better with this app then chrome on mobile devices.
